Name of Student: Rikisha Bhattacharya	**PRN: 25070122155**
Semester: III	**Year: AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No: 11	
TITLE: Interface Implementation	

Problem Statement

Write a Java program to demonstrate the implementation of interfaces.

Learning Objectives

To implement interfaces for achieving abstraction and multiple inheritance of type.

1. Create an interface Printable and implement it in Student and Employee classes.

Programme

```java
interface Printable {
    void print();
}

class Student implements Printable {

    public void print() {
        System.out.println(x: "Student details are displayed.");
    }
}

class Employee implements Printable {

    public void print() {
        System.out.println(x: "Employee details are displayed.");
    }
}

public class Assignment11 {
    Run | Debug
    public static void main(String[] args) {

        Printable s = new Student();
        Printable e = new Employee();

        s.print();
        e.print();
    }
}
```

Output

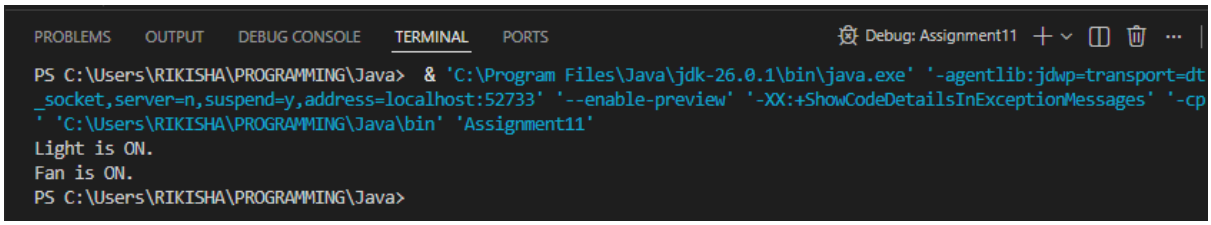

```
PS C:\Users\RIKISHA\PROGRAMMING\Java> cd src
PS C:\Users\RIKISHA\PROGRAMMING\Java\src> javac Assignment11.java
PS C:\Users\RIKISHA\PROGRAMMING\Java\src> java Assignment11
Student details are displayed.
Employee details are displayed.
PS C:\Users\RIKISHA\PROGRAMMING\Java\src>
```

2. Create an interface Switchable with a method turnOn(). Implement the interface in Light and Fan classes to display the device status.

Programme

Output

Conclusion

This assignment helped us understand the implementation of interfaces in Java. We learned how a class implements an interface and provides definitions for its methods.

The program demonstrates abstraction, method implementation, and code reusability in Java.
