Name of Student: Rikisha Bhattacharya	**PRN: 25070122155**
Semester: III	**Year: AY 2026-27**
Subject: Programming with Java	
ASSIGNMENT No: 13	
TITLE: File Handling in Java	

Problem Statement

Write a Java program to perform reading from and writing to a file using file handling operations.

Learning Objectives

To perform file reading and writing operations using Java file handling classes.

1. Create a program to write and read employee details from a file.

Programme

```java
import java.io.*;
public class Assignment13 {

    Run | Debug
    public static void main(String[] args) {

        String fileName = "employee.txt";

        try {
            // Writing to file
            FileWriter writer = new FileWriter(fileName);

            writer.write(str: "Employee ID: 101\n");
            writer.write(str: "Name: Riya\n");
            writer.write(str: "Department: IT\n");
            writer.write(str: "Salary: 50000\n");

            writer.close();

            System.out.println(x: "Employee details written successfully.");

            // Reading from file
            FileReader reader = new FileReader(fileName);
            BufferedReader br = new BufferedReader(reader);

            String line;

            System.out.println(x: "\nEmployee Details:");

            while ((line = br.readLine()) != null) {
                System.out.println(line);
            }

            br.close();
        }

        catch (IOException e) {
            System.out.println("File error: " + e.getMessage());
        }
    }
}
```

Output

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS                powershell
PS C:\Users\RIKISHA\PROGRAMMING\Java\src> javac Assignment13.java
PS C:\Users\RIKISHA\PROGRAMMING\Java\src> java Assignment13
Employee details written successfully.

Employee Details:
Employee ID: 101
Name: Riya
Department: IT
Salary: 50000
PS C:\Users\RIKISHA\PROGRAMMING\Java\src>
```

2. Create a Java program to write patient details (patient ID, name, age, and diagnosis) to a file and read the details from the file for display.

Programme

```java
import java.io.*;

public class Assignment13 {

    Run | Debug
    public static void main(String[] args) {

        String fileName = "patient.txt";

        try {
            // Writing patient details
            FileWriter writer = new FileWriter(fileName);

            writer.write(str: "Patient ID: 201\n");
            writer.write(str: "Name: Ananya\n");
            writer.write(str: "Age: 25\n");
            writer.write(str: "Diagnosis: Fever\n");

            writer.close();

            System.out.println(x: "Patient details written successfully.");

            // Reading patient details
            FileReader reader = new FileReader(fileName);
            BufferedReader br = new BufferedReader(reader);

            String line;

            System.out.println(x: "\nPatient Details:");

            while ((line = br.readLine()) != null) {
                System.out.println(line);
            }

            br.close();
        }

        catch (IOException e) {
            System.out.println("File error: " + e.getMessage());
        }
    }
}
```

Output

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS        Debug: Assignment13
PS C:\Users\RIKISHA\PROGRAMMING\Java\src>  & 'C:\Program Files\Java\jdk-26.0.1\bin\java.exe' '-agentlib:jdwp=transport=dt_soc
et,server=n,suspend=y,address=localhost:59955' '--enable-preview' '-XX:+ShowCodeDetailsInExceptionMessages' '-cp' 'C:\Users\R
KISHA\AppData\Roaming\Code\User\workspaceStorage\c98c544804620a36b128628ff82a3bc7\redhat.java\jdt_ws\src_53a79d24\bin' 'Assig
ment13'
Patient details written successfully.

Patient Details:
Patient ID: 201
Name: Ananya
Age: 25
Diagnosis: Fever
PS C:\Users\RIKISHA\PROGRAMMING\Java\src>
```

Conclusion

The programs demonstrate Java file handling by writing data to files and reading it back using FileWriter, FileReader, and BufferedReader. They also demonstrate exception handling for possible file-related errors.
